Delphi Advanced Programming Technology

Department: Electronic Information

College: Information Engineering College

Editor: Sun Zhao-yun
Content

Chapter 1 - Delphi 7 and Its IDE ................................................................. 1
  1. Editions of Delphi .................................................................................. 1
  2. An Overview of the IDE ........................................................................ 1
  3. The Delphi Editor .................................................................................. 2
  4. The Form Designer ................................................................................ 4
  5. Managing Projects ................................................................................ 6
  6. Additional and External Delphi Tools .................................................. 8
  7. The Files Produced by the System ....................................................... 9
  8. The Object Repository .......................................................................... 9

Chapter 2 - The Delphi Programming Language ........................................ 10
  1. Core Language Features ....................................................................... 10
  2. Classes and Objects ............................................................................. 10
  3. Encapsulation ...................................................................................... 12
  4. Constructors ....................................................................................... 13
  5. Delphi's Object Reference Model ....................................................... 14
  6. Inheriting from Existing Types ............................................................ 16
  7. Late Binding and Polymorphism ......................................................... 17
  8. Type-Safe Down-Casting ..................................................................... 19
  9. Working with Exceptions ..................................................................... 21

Chapter 3 - The Run-Time Library .............................................................. 23
  1. The Units of the RTL ........................................................................... 23
  2. Converting Data .................................................................................. 30
  3. The TObject Class .............................................................................. 32

Chapter 4 - Core Library Classes ............................................................... 34
  1. The RTL Package, VCL, and CLX ....................................................... 34
  2. The TPersistent Class ......................................................................... 35
  3. The Tcomponent Class ....................................................................... 36
  4. Lists and Container Classes ............................................................... 41
  5. Streaming ........................................................................................... 43
  6. Summarizing the Core VCL and BaseCLX Units ......................... 44

Chapter 5 - Visual Controls ....................................................................... 46
  1. VCL versus VisualCLX ........................................................................ 46
  2. TControl and Derived Classes ........................................................... 48
  3. Opening the Component Toolbox ....................................................... 51
  4. Control-Related Techniques ............................................................... 56
  5. ListView and TreeView Controls ..................................................... 58

Chapter 6 - Building the User Interface .................................................... 60
1. Multiple-Page Forms ................................................................................................................... 60
2. The ToolBar Control .................................................................................................................... 60
3. Themes and Styles ....................................................................................................................... 61
4. The ActionList Component ........................................................................................................ 62
5. Toolbar Containers ..................................................................................................................... 63
6. The ActionManager Architecture ............................................................................................. 63

Chapter 7 - Working with Forms .................................................................................................. 65
1. The TForm Class ........................................................................................................................ 65
2. Direct Form Input ......................................................................................................................... 66
3. Painting on Forms ....................................................................................................................... 68
4. Position, Size, Scrolling, and Scaling .......................................................................................... 69
5. Creating and Closing Forms ........................................................................................................ 74
6. Dialog Boxes and Other Secondary Forms ................................................................................. 76
7. Creating a Dialog Box .................................................................................................................. 76
8. Predefined Dialog Boxes ............................................................................................................ 77
9. About Boxes and Splash Screens .............................................................................................. 78

Chapter 8 - The Architecture of Delphi Applications ..................................................................... 79
1. The Application Object ................................................................................................................. 79
2. From Events to Threads ............................................................................................................... 81
3. Creating MDI Applications ......................................................................................................... 85
4. Frame and Child Windows in Delphi ........................................................................................... 85
5. MDI Applications with Different Child Windows ...................................................................... 87
6. Understanding Frames ................................................................................................................. 87
7. Using a Base Form Class ............................................................................................................. 90

Chapter 9 - Writing Delphi Components ......................................................................................... 93
1. Extending the Delphi Library ...................................................................................................... 93
2. Building Your First Component .................................................................................................. 95

Chapter 10 - Libraries and Packages ............................................................................................. 102
1. The Role of DLLs in Windows ...................................................................................................... 102
2. Using Existing DLLs ..................................................................................................................... 104
3. Creating a DLL in Delphi ............................................................................................................. 104
4. Using Delphi Packages .............................................................................................................. 108
5. The Structure of a Package ........................................................................................................ 110

Chapter 11 - Delphi's Database Architecture .................................................................................... 111
1. Accessing a Database: dbExpress, Local Data, and Other Alternatives .................................... 111
2. MyBase: Stand-alone ClientDataSet ........................................................................................... 113
3. Using Data-Aware Controls ....................................................................................................... 118
4. The DataSet Component ........................................................................................................... 122
5. The Fields of a Dataset .............................................................................................................. 123
6. Navigating a Dataset .................................................................................................................. 126
7. Customizing a Database Grid ..................................................................................................... 127
